About Me

Over ten years of customer-facing experience across retail, hospitality, and service industries taught me how to read people, solve problems on the spot, and make sure every interaction lands well. A background in software engineering added a layer of analytical thinking that I bring to everything process, detail, follow-through. I take care of the person in front of me and the work behind the scenes. Currently pursuing a **B.S. in Real Estate at Georgia State University.**

Skills

People & Service

Active listening · needs assessment · clear communication · adapting explanations · de-escalation · rapport building · high-volume customer environments · cross-functional collaboration · stakeholder management · client relationship management · translating technical concepts for nontechnical audiences

Education

Bachelors of Real Estate

Georgia State · Expected Completion – 2029

Experience

Full Stack Software Consultant

Self-Employed · August 2019 – Present

- Worked directly with small business owners to understand their needs and build custom solutions
- Automated business workflows to save time and improve efficiency
- Built marketing systems including Google Ads and web presence
- **Sole point of contact** from strategy through delivery and ongoing support

Full Stack Software Engineer

Podium January · 2022 – October 2023

- Built the customer on-boarding flow from the ground up no process existed, we designed and shipped a guided, animated, customizable experience that helped small businesses understand and adopt the platform
- Directly contributed to a **25% reduction in churn** and **30% increase in retention** within six months of launch
- Collaborated closely with product and design teams to understand user needs and translate them into an intuitive experience

IT & Operations Support

DispatchHealth · March 2020 – January 2022

- Served as the internal IT support team, troubleshooting hardware and software issues in real time for clinical staff in the field during active patient visits
- Administered user accounts and managed access across the company's digital health records platform (Athena Health)
- Resolved technical issues **quickly and calmly under high pressure** supporting medical professionals who couldn't afford downtime
