About Me

Over ten years of customer-facing experience across retail, hospitality, and service industries taught me how to read people, earn trust fast, and guide them toward a decision that actually fits. I thrive in high-volume, fast-paced environments where results matter, and I bring a background in software engineering that adds analytical rigor and sharp attention to detail. I care about the person in front of me and the follow-through behind the scenes and I'm driven by hitting targets and helping people reach goals that genuinely matter to them.

Skills

Experience

Full Stack Software Consultant

Self-Employed · August 2019 – Present

- Worked directly with small business owners to understand their needs and build custom solutions
- Automated business workflows to save time and improve efficiency
- Built marketing systems including Google Ads and web presence
- Sole point of contact from strategy through delivery and ongoing support

Full Stack Software Engineer

Podium January · 2022 – October 2023

- Built the customer on-boarding flow from the ground up no process existed, we designed and shipped a guided, animated, customizable experience that helped small businesses understand and adopt the platform
 - Directly contributed to a 25% reduction in churn and 30% increase in retention within six months of launch
- Collaborated closely with product and design teams to understand user needs and translate them into an intuitive experience

IT & Operations Support

DispatchHealth · March 2020 – January 2022

- Served as the internal IT support team, troubleshooting hardware and software issues in real time for clinical staff in the field during active patient visits
- Administered user accounts and managed access across the company's digital health records platform (Athena Health)
 - Resolved technical issues quickly and calmly under high pressure supporting medical professionals who couldn't afford downtime
